Subject Persistence of user request information

Description of Problem or Suggestion:

Some level of user request information must be tracked for a very long time (years). For example, if a DAAC discovers that data product X generated 2 years ago is bad they need to be able to alert any user who requested that product.

Originator's Recommendation

- 1) Evaluate the kinds of request information maintained for lifetime requirements.
- 2) Develop a strategy for maintaining request information based on these lifetime requirements.
